#### Sampling Tolerances

Care needs to be taken because not all differences are significant and may be due to chance because not all the population was sampled. The tables below show the degree of uncertainty on the values given at the 95% confidence interval for a single population and a comparison of two groups.

For example, for a question with 90% satisfied and 10% dissatisfied for 2447 respondents, we would expect the true proportion satisfied to be between 89% and 91%, 19 times in 20. A comparison between two districts with 200 respondents each would need a difference of at least 10% to be significant, if the statistic was near 30 or 70%.

| Sample tolerances based on samp | le size           |       |       |
|---------------------------------|-------------------|-------|-------|
|                                 | Percentage Levels |       |       |

### Marked Up Questionnaire

- Results are based on interviews with 2447 residents aged 18+ in 192 sample points (EDs) across Lancashire County Council.
- Interviews were conducted face-to-face, in home between 15<sup>th</sup> September and 9<sup>th</sup> December 2003.
- A representative quota sample was interviewed with quotas set by age, gender and work status using 2001 Census data.
- Data are weighted by age, gender, work status to the known profile of the area.
- Where results do not sum to 100% this may be due to multiple responses or computer rounding.
- An asterisk (\*) indicates a value of less than 0.5%, but not zero.
- Results are based on all respondents unless stated otherwise.
